DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Double Patenting

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

3. Claims 1, 3, 4, and 7-10 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1, 3, 4, 10-12, and 16, respectively, of prior U.S. Patent No. 6718501. This is a double patenting rejection.

Art Unit: 2137

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 2, 5, and 6 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2, 5, and 6 of U.S. Patent No. 6718501. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the conflicting patent render obvious or anticipate the claims of the present application. In reference to Claim 2, the only difference in the claims is that the conflicting claim recites "substantially corresponds" as opposed to "corresponds" in the claim in the present application; it would be obvious that when the values "substantially correspond" they could be close enough to exactly correspond. In reference to Claims 5 and 6, the conflicting claims recite "at least one of said parity symbols", and the claims of the present application recite "one of said parity symbols". "One of" is encompassed by, and therefore anticipated by "at least one of".

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Siquin et al, US Patent 6425098, discloses a method of preventing unauthorized copying of an optical disc in which data is intentionally replaced with errors that will not be corrected by error correction processes.
